DDoS attacks delay trains, halt transportation services in Sweden

f 💙 💿 🚱 🚭 🕒

A series of distributed of denial of service attacks aimed at Sweden's transportation services caused train delays and disrupted over travel service earlier this week.

A series of distributed of denial of service attacks aimed at Sweden's transportation services caused train delays and disrupted over travel service earlier this week.

The first attack took place on 11 October, striking the Sweden Transport Administration (Trafikverket) via its two internet service providers, TDC and DGC. The DDoS bombardment reportedly crashed the IT system that monitors trains' locations and tells operators when to go or stop. It also took down the federal agency's email system, website, and road traffic maps.

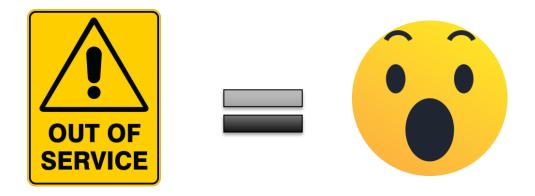

DDoS attacks delay trains, halt transportation services in Sweden

Customers during this time were unable to make reservations or receive updates on the delays, BleepingComputer reported, citing local Swedish press.

Availability is Critical

Distributed Denial-of-Service (DDoS) attacks will kill availability.

How large would the impact be if services are unavailable? Inconvenient? Loss of money? Live of citizens?

Uptime All The Time

✓ Protection

- ✓ Reduce latency
- ✓ Safeguard your assets
- ✓ No interruption to daily life

Build Your Cybersecurity Strategy While Building A Smart City

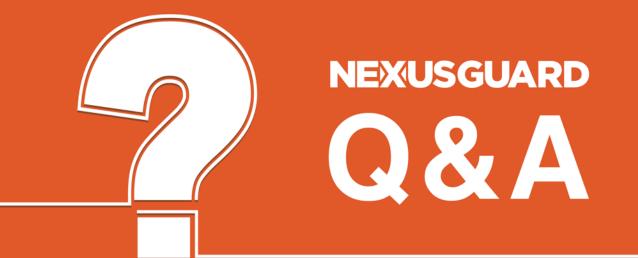

Take Home Message

- Availability is necessary, down time cost is huge and unimaginable.
- Effort to ensure uptime is required.
- Plan your Cybersecurity strategy while building up a Smart City.
- Achieve an ultimate goal of creating Safe Smart City that you can trust.
